

# How does your garden grow?

Year 3 topic Summer Term 2nd Half 2018

Lindsay from Scout ED came to school to help us learn about plants in our local environment.

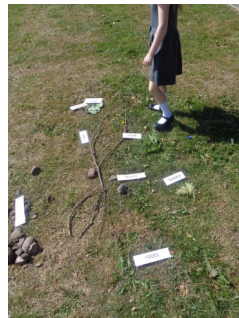

We enjoyed toasting marshmallows over the fire at the end of the day.

Using tape measures, we were able to investigate the age of trees.

We looked for and collected different plants that we could find on the school field.

We worked in groups to create and label models of plants using objects we could find in the environment.

We used hammers and fabric to create our own designs. The plants and flowers we chose were imprinted onto our fabric.
