

Long Term Plan Computing

Year 5

Aims

- can understand and apply the fundamental principles and concepts of computer science, including abstraction, logic, algorithms and data representation
- can analyse problems in computational terms, and have repeated practical experience of writing computer programs in order to solve such problems
- can evaluate and apply information technology, including new or unfamiliar technologies, analytically to solve problems
- are responsible, competent, confident and creative users of information and communication technology.

Pupils should be taught to:

- design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts
- use sequence, selection, and repetition in programs; work with variables and various forms of input and output
- use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs
- understand computer networks including the internet; how they can provide multiple services, such as the world wide web; and the opportunities they offer for communication and collaboration
- use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content
- select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information
- use technology safely, respectfully and responsibly; recognise acceptable/unacceptable behaviour; identify a range of ways to report concerns about content and contact.

Term	Unit	Overview	Knowledge	Skills	Assessment
Autumn 1	Computing systems and networks - Sharing information	Learners will develop their understanding of computer systems and how information is transferred between systems and devices. Learners will consider small-scale systems as well as large-scale systems. They will explain the input, output, and process aspects of a variety of different real-world systems. Learners will also	To recognise that computers can be part of a system in an electronic device To recognise input, process, and output in larger computer systems To recognise how information is transferred across the internet To recognise that connections between computers allow us to work together To explain that the internet lets people in different places work together To recognise that connections between computers allow us to access shared stored files To explain that the internet allows different media to be shared To recognise that internet collaborations can be public or private	To explain that computers can be connected together to form systems To recognise the role of computer systems in our lives	Can children explain that computers can be connected to form systems? Can children recognise the role of computer systems in our lives?

Long Term Plan Computing

Year 5

		<p>take part in a collaborative online project with other class members and develop their skills in working together online.</p>	<p>To understand that computers can be connected together to form systems To see that computers communicate with other devices (including other computers) To evaluate different ways of working together To recognise the role of computer systems in our lives To explain that data is transferred in packets To recognise that data is transferred using agreed protocols (methods)</p>		
		<p>Vocabulary COMPUTING SYSTEMS AND NETWORKS Sharing information Online safety System, connection, digital, input, process, output, protocol, address, packet, chat, explore, slide deck, reuse, remix, collaboration</p>			

Autumn 2	Creating media - Video editing	<p>This unit gives learners the opportunity to learn how to create short videos in groups. As they progress through this unit, they will be exposed to topic-based language and develop the skills of capturing, editing, and manipulating video. Active learning is encouraged through guided questions and by working in small groups to investigate the use of devices and software. Learners are guided with step-</p>	<p>To explain the features of video as a visual media format To recognise which devices can and can't record video To explain the purpose of a storyboard To recognise that filming techniques can be used to create different effects To recognise the need to regularly review and reflect on a video project To recognise projects need to be exported to be shared To identify that videos can be edited on a recording device or on a computer To explain the limitations of editing video on a recording device To identify videos can be improved through and reshooting or editing To recognise projects need to be exported to be shared</p>	<p>To use different camera angles To use pan, tilt and zoom To identify features of a video recording device or application To combine filming techniques for a given purpose To determine what scenes will convey your idea To choose to reshoot a scene or improve later through editing To decide what changes I will make when editing To use split, trim and crop to edit a video</p>	<p>Can children use different camera angles? Can children use pan, tilt and zoom? Can children identify features of a video recording device or application? Can children combine filming techniques for a given purpose? Can children determine what scenes will convey your idea? Can children choose to reshoot a scene or improve later through editing? Can children decide what changes I will make when editing? Can children use split, trim and crop to edit a video?</p>
----------	--------------------------------	--	--	---	---

Long Term Plan Computing

Year 5

		<p>by-step support to take their idea from conception to completion. At the teacher's discretion, the use of green screen can be incorporated into this unit. At the conclusion of the unit, learners have the opportunity to reflect on and assess their progress in creating a video.</p>			
		<p>Vocabulary Video editing Online safety Video audio, recording, storyboard, script, soundtrack, dialogue, capture, zoom, storage, digital, tape, AV (audiovisual), videographer, video techniques, zoom, pan, tilt, angle, YouTuber, content, camera, colour, export, trim/clip, titles, end credits, timeline, transitions, soundtrack, retake/reshoot, special effects, constructive feedback</p>			

Spring 1	<p>Programming - Scratch</p> <p>Could also use crumbles</p>	<p>Children will design and programme a character game. They will design backdrops and know how to add features or effects to improve a game. They will achieve specific goals and know how to make changes to their sprite.</p>	<p>To know how to design and programme a character game</p> <p>Know how to design my own characters and backdrops</p> <p>To know how to add features or effects to enhance a game</p> <p>To know how to create an original animated game with a specific goal</p> <p>Know how to program costume changes for a sprite</p>	<p>To draw a background</p> <p>To draw a background using blocks to make a maze</p> <p>To select and change a character</p> <p>To program commands that control the movement of a sprite</p> <p>Make a more complex maze</p> <p>Use tools to draw my own character (sprite)</p> <p>Test and debug a program after making changes</p> <p>Add appropriate comment to a code</p> <p>Add sounds as a consequence of an action</p>	<p>Can children draw a background using blocks to make a maze?</p> <p>Can children select and change a character?</p> <p>Can children program commands that control the movement of a sprite?</p> <p>Can children make a more complex maze?</p> <p>Can children use tools to draw their own character (sprite)?</p> <p>Can children test and debug a program after making changes?</p>
----------	---	--	---	---	--

Long Term Plan Computing

Year 5

				<p>Create events as a consequence to another action Make two characters move in relation to one another To plan sequences of instructions (an algorithm) Translate logical instructions into coding (blocks) To design new costumes for a sprite And code that switches this To add appropriate effects to complement a change of costume</p>	<p>Can children add appropriate comment to a code? Can children add sounds as a consequence of an action? Can children create events as a consequence to another action? Can children make two characters move in relation to one another? Can children plan sequences of instructions (an algorithm)? Can children translate logical instructions into coding (blocks)? Can children design new costumes for a sprite?</p>
		<p>Vocabulary Sequence, sprite, costume, block, script, blocks palette, scripts area, stage, backgrounds</p>		<p>Can children add appropriate effects to complement a change of costume?</p>	

Long Term Plan Computing

Year 5

Spring 2	Data and information - Flat-file databases	<p>This unit looks at how a flat-file database can be used to organise data in records. Pupils use tools within a database to order and answer questions about data. They create graphs and charts from their data to help solve problems. They use a real-life database to answer a question, and present their work to others.</p>	<p>To design an approach to answer a question using a database To explain that a computer program can be used to organise data To outline how ordering data allows us to answer some questions To explain that tools can be used to select data to answer questions To outline how operands can be used to filter data To outline how 'AND' and 'OR' can be used to refine data selection To explain that computer programs can be used to compare data visually To explain that we present information to communicate a message</p>	<p>To navigate a flat-file database To choose multiple criteria to search data to answer a given question (AND and OR) To design a structure for a flat-file database To choose different ways to view data To choose which attribute to sort data by to answer a given question To choose which attribute and value to search by to answer a given question (operands) To ask questions that need more than one attribute to answer To select an appropriate graph to visually compare data To choose suitable ways to present information to other people</p>	<p>Can children navigate a flat-file database? Can children choose multiple criteria to search data to answer a given question (AND and OR)? Can children design a structure for a flat-file database? Can children choose different ways to view data? Can children choose which attribute to sort data by to answer a given question? Can children choose which attribute and value to search by to answer a given question (operands)? Can children ask questions that need more than one attribute to answer? Can children select an appropriate graph to visually compare data? Can children choose suitable ways to present information to other people?</p>
		<p>Vocabulary data, information, record, field, sort, order, group, search, criteria, value, graph, chart, axis, compare, filter, presentation</p>			

Long Term Plan Computing

Year 5

<p>Summer 1</p>	<p>Creating media - Vector drawing</p>	<p>learners start to create vector drawings. They learn how to use different drawing tools to help them create images. Learners recognise that images in vector drawings are created using shapes and lines, and each individual element in the drawing is called an object. Learners layer their objects and begin grouping and duplicating them to support the creation of more complex pieces of work. This unit is planned using the Google Drawings app, other alternative pieces of software are available.</p>	<p>To identify that a vector drawing comprises separate objects To recognise that each object in a drawing is in its own layer To explain how alignment and size guides can help create a more consistent drawing To recognise that objects can be modified in groups To consider the impact of one object or choices made</p>	<p>To add an object to a vector drawing To delete objects To move objects between the layers of a drawing To group and ungroup selected objects To select one object or multiple choices To modify objects To duplicate objects using copy and paste To reposition objects To combine options to achieve a desired effect To create a vector drawing for a given purpose</p>	<p>Can the children add an object to a vector drawing? Can they delete objects Can children move objects between the layers of a drawing? Can children group and ungroup selected objects? Can children select one object or multiple choices? Can children modify objects? Can children duplicate objects using copy and paste? Can children reposition objects? Can children combine options to achieve a desired effect? Can children create a vector drawing for a given purpose?</p>
		<p>Vocabulary drawing tools, shapes, object, icons, toolbar, move, resize, colour, rotate, duplicate/copy, zoom, select, alignment grid, handles, consistency, modify, layers, front, back, copy, paste, group, ungroup, reuse, improvement, evaluate, alternatives</p>			

Long Term Plan Computing

Year 5

<p>Summer 2</p>	<p>Programming B - Selection in quizzes</p>	<p>pupils develop their knowledge of selection by revisiting how conditions can be used in programs and then learning how the If... Then... Else structure can be used to select different outcomes depending on whether a condition is true or false. They represent this understanding in algorithms and then by constructing programs using the Scratch programming environment. They use their knowledge of writing programs and using selection to control outcomes to design a quiz in response to a given task and implement it as a program</p>	<p>To define that conditional statements are used in computer programs To relate that a conditional statement connects a condition to an outcome To explain that instructions in a program will produce specific outcomes To outline that a condition is something that can either be true or false To relate that a count-controlled loop contains a condition To explain that a loop can stop when a condition is met, eg number of times To explain a sequence within a count-controlled or event-controlled loop To explain that a loop can stop when a condition is met, eg an event To modify a count-controlled or event-controlled loop To create a count-controlled or event-controlled loop To explain the importance of instruction order in 'if... then...' statements To conclude that a loop can be used to repeatedly check whether a condition has been met To explain the importance of instruction order in 'if... then... else...' statements</p>	<p>To experiment with a repeat-until loop To use a condition in an 'if... then...' statement to produce a given outcome To show that a condition can switch program flow in one of two ways To show that a condition can switch program flow in one of two ways</p>	<p>Can children experiment with a repeat-until loop? Can children use a condition in an 'if... then...' statement to produce a given outcome? Can children show that a condition can switch program flow in one of two ways? Can children show that a condition can switch program flow in one of two ways?</p>
		<p>Vocabulary condition, true, false, count-controlled loop, outcomes, conditional statement - the linking together of a condition and outcomes, algorithm, program, debug, implement, question, answer, task, input, outcomes, test, run, setup, share, evaluate, constructive</p>			
<p>Enrichment Internet safety week Remote learning at home learning using the internet Anti-bullying week (keeping safe online opportunities) Using computing skills across the curriculum</p>
